HEALTH INSURANCE COVERAGE AND CHILDREN

Despite various policy initiatives by the federal government, a substantial number of children in the United States remain uninsured. Two-thirds of children under eighteen are covered by private health insurance, one-fifth are covered only by public insurance, and the remainder, approximately eleven million children, have no health insurance coverage at all. This is a major public health problem since uninsured children are less likely to receive any ambulatory care, and are more likely to experience barriers to obtaining needed medical care.

The State Children's Health Insurance Program enacted in 1997, represents the single largest Federal commitment to child health since Medicaid. The program devotes \$24 billion in federal funds over a five-year period to increasing children's health insurance coverage. This program is designed to help states expand health care coverage to millions of uninsured children who currently do not qualify for Medicaid. As of December 1998, 47 of 53 Child Health Insurance Programs (CHIP) proposals received from states have been approved by the Department of Health and Human Services (DHHS). Within the next two years DHHS hopes to have all 53 CHIP plans working to provide coverage for the millions of children under age 19 who are currently uninsured.

ADOLESCENT DEPRESSION

Adolescent depression is defined as a pronounced change in a youth's overall functioning characterized by a constellation of symptoms. Dysphoric mood or anhedonia must be present accompanied by other symptoms such as sleep and appetite disturbances, psychomotor agitation, concentration difficulties and feelings of worthlessness. The literature indicates that up to 24% of adolescents have an episode of major depression by the age of 18. Adolescent depression is often of long duration and typically comorbid with other psychiatric disorders and psychosocial impairment. Research indicates that affected adolescents are at increased risk for suicide and adult depression, anxiety, and substance use disorders. NIMH is currently funding research on psychosocial interventions that may be successful in treating adolescent depression.

BINGE DRINKING AMONG COLLEGE STUDENTS

Binge drinking is defined for men as consuming five or more drinks in a row within the previous two weeks, and for women as consuming four or more drinks in a row. Binge drinking among college students has been the focus of recent studies. The literature indicates that binge drinking puts the individual at increased risk for alcohol-related problems such as: driving after drinking, damaging property, getting injured, missing classes, and getting behind in school work. Research

indicates that students belonging to fraternities and sororities average more drinks per week and are more likely to take part in binge drinking than their non-Greek counterparts. SAMHSA'S Alcohol Initiative on Underage Drinking has been studying this issue in order to find ways to deal with this problem.

HIV AND MORTALITY

HIV is one of the leading causes of premature death in the U.S. The literature indicates that deaths due to HIV appear to have the greatest impact on men aged 25-44 years. However, death

has not been confined to any gender, racial or ethnic group. Research indicates that the mortality rates for HIV has declined an unprecedented 47%. HIV is now the 14th leading cause of death in the U.S. instead of the 8th. This decline is attributed to recent advances in the treatment of HIV infection. The use of a combination antiretroviral therapy and protease inhibitors has led to this decline. The National Center for Health Statistics has recently published mortality data reflecting this decline on their website: <http://www.cdc.gov/nchswww>.

MASKING AUTHOR IDENTITY AND QUALITY OF PEER REVIEW

Standard masking procedure involves the removal of the author and his institutional identity from the title page, running headers, footers, and acknowledgements of manuscripts submitted for publication. The literature indicates that masking reviewers to author identity would improve the fairness and quality of peer review because well-known authors' work may be reviewed less critically. However, only a small fraction of journals routinely mask authors due to the burden associated with masking. Research indicates that manuscripts by generally well-known authors are 70% less likely to be successfully masked than less known authors. AHCPR recently funded research which concluded that masking author identity does not improve quality of reviews.

REINVENTING GOVERNMENT

Since 1990, the management staff of the Parklawn Health Library has selected 10 journal articles per month on innovative management techniques to appear in each Bulletin. First entitled "Total Quality Management," this recurring bibliography was recently renamed "Reinventing Government" to reflect and support the Administration's efforts to create a government that works better and costs less.

TELEHEALTH

Telehealth is the use of electronic information and telecommunications technologies to support long-distance clinical health care, patient and professional health-related education, public health and health administration. The literature indicates that technologies used in telehealth already exist, but are not in common use. Research indicates barriers to its use include system integration problems, payment policies, licensure, remote access, and treatment management. HRSA has established the Office for the Advancement of Telehealth (OAT) to serve as a leader in telehealth to advance the use of telecommunications, train health care providers, and encourage linkages for knowledge exchange in the provision of health care services to the underserved.

GUIDE TO LIBRARY RESOURCES

THE HUMAN RESOURCES GLOSSARY. Tracey, William R., St. Lucie Press, Washington, DC, 1998. Ref-Dict HF/5549.A23/T6721.

The Human Resources Glossary is a reference source for HR executives, managers and practitioners. It is arranged into two sections with the first section containing definitions of human resources acronyms, abbreviations and terms. This section contains over 8,500 entries with over 1,400 abbreviations and acronyms. Section two is an index of key terms listed under fifty-six headings. Each of the headings represents a major area of interest for HR managers and practitioners. Examples of some of the headings are listed below:

Associations
Desktop Publishing
Disability
Health Care
Laws and Legal
Leadership

Meeting Management
Performance Appraisal
Problem Solving
Substance Abuse
Terms and Team and Building
Work Measurement

RESOURCES FOR PEOPLE WITH DISABILITIES. Oakes, EH. and Bradford, J. eds. Ferguson Publishing Company, Chicago, il, 1998. Ref-Assn WB/22AA1/R31251.

This two volume directory is a comprehensive resource for information on physical, developmental and learning disabilities. It contains a disabilities index, arranged by state; a state and city index; and an organization name index. There are four main sections of this resource which include:

Assistive technology
Funding sources
Organizations and associations
Other resources

LIBRARY CLIENTELE

The Parklawn Health Library System serves the following components of the Department of Health and Human Services (HHS):

- Administration for Children and Families
- Administration on Aging
- Agency for Health Care Policy and Research
- HHS Regional Offices
- Health Resources and Services Administration
- Indian Health Service
- National Center for Health Statistics
- National Institute of Mental Health
- National Institute on Drug Abuse
- Office of the Secretary
- Office of Public Health and Science
- Program Support Center
- Substance Abuse and Mental Health Services Administration

LIBRARY MISSION

The Parklawn Health Library, the NCHS Staff Research Library, and the Information Resources Center plan, develop, and administer a national research collection and innovative information programs in direct support of the Department of Health and Human Services.

LIBRARY COLLECTION

The Scope of the collection includes the delivery of health care, health administration, health policy, health services research, health promotion and disease prevention, computer sciences, management sciences, medical sociology, health statistics, international health, epidemiology, public health, mental health, psychiatry and neurology, and substance abuse.
